

I CLAIM:

1. A liquid lipstick dispensing device comprising:
 - a container including a chamber formed therein to receive lipstick material therein and defined by an inner peripheral surface,
5 and including a lower portion,
 - a piston slidably received in said chamber of said container and engageable with said lipstick material, for forcing said lipstick material to flow out of said container,
means for moving said piston relative to said container to force
10 said lipstick material out of said container, and
 - a mouth including a housing attached to said lower portion of said container, to receive said lipstick material and to allow said lipstick material to flow out of said container via said mouth, said housing including a bore formed therein, said mouth further
15 including a barrel received in said bore of said housing and having a passage formed therein for allowing said lipstick material to flow out of said container through said passage of said barrel, said barrel including a peripheral flange extended radially out therefrom to engage with said inner peripheral surface of said container, and to
20 make a water tight seal between said barrel and said container.
2. The liquid lipstick dispensing device as claimed in claim 1, wherein said barrel includes an inclined surface formed on formed in an outer peripheral portion thereof, for engaging with said inner peripheral surface of said container.
- 25 3. The liquid lipstick dispensing device as claimed in claim 1, wherein said container includes at least one peripheral groove formed therein, said housing includes at least one peripheral rib

extended therefrom, for engaging into said at least one peripheral groove of said container, and for securing said housing to said container.

4. The liquid lipstick dispensing device as claimed in claim 1,
5 wherein said barrel includes a peripheral hub extended upwardly therefrom to define said passage thereof.

5. The liquid lipstick dispensing device as claimed in claim 1,
wherein said housing includes a peripheral swelling extended radially inward therefrom, said barrel includes a shank having a
10 decreased outer diameter and engaged through said peripheral swelling of said housing, and extended into said housing, to form a shoulder therein, and to engage with said peripheral swelling of said housing, to anchor said barrel to said housing.

6. The liquid lipstick dispensing device as claimed in claim 1,
15 wherein said mouth further includes a cap attached to said housing and having a space formed therein, said cap includes a perforated member to dispense said lipstick material.

7. The liquid lipstick dispensing device as claimed in claim 6,
wherein said housing includes a peripheral slot formed therein, said
20 cap includes a peripheral rib extended radially out therefrom to engage into said peripheral slot of said housing, and to anchor said cap to said housing.
